Education and Public Outreach Summary

Suzanne Jacoby EPO Project Manager

October 23, 2013

LSST is a Different Kind of Telescope

- An integrated survey system. The Observatory, Telescope, Camera and Data Management system are all built to support the LSST survey. There's no PI mode, proposals, or time.
- Observe the database, simultaneous investigations, data mining rather than classic observing. Open database, no proprietary period.
- The ultimate deliverable of LSST is not the telescope, or the camera; it's the <u>fully reduced</u> <u>data</u>.

"LSST" is the <u>database</u>. The "Google Index" of the Optical Sky.

Broader Impacts of LSST Include Education and Public Outreach (EPO) Activities

EPO Goals

- Broadening Participation to Include a Large, Diverse Audience
- Actively engage public in science discovery and research process
- Addressing National Priorities in STEM Education and Science Literacy
- Leveraging Emerging Trends in Free-Choice Learning and Social Networking
- Incorporating Evidence-based Evaluation of Participant Outcomes
- Make LSST a resource for content creators and education researchers

The LSST EPO Program Engages Many Audiences Including Education Researchers

LSST EPO will have a dynamic public **web presence** as well as a **physical presence** in classrooms and science centers promoting engagement in the research process.

LSST EPO Integrates Education & Research

- Citizen science extends goals of LSST and impacts participants' knowledge
- Education research possible from tracking registered users for 10+ years
- EPO participants gain awareness, engagement, skills, knowledge

Sustainable Partnerships with Institutional Member EPO programs and other organizations are necessary for dissemination, leveraging, and implementation.

Learning Experiences for Each User Group

EPO Portal, database, collaborative workspace used by all user groups

FINAL DESIGN REVIEW | TUCSON, AZ | OCTOBER 21-25, 2013

EPO <u>Construction</u> Effort has Defined Scope, Subsystem Requirements, and an Integrated Plan

SCOPE

Build infrastructure that enables education and public engagement during Operations.

REQUIREMENTS – Key Documents

LSE-89, the EPO Subsystem Requirements flow from LSR (LSE-29) and OSS (LSE-30)

LSE-131, the EPO/DM Interface Control Document

PLAN

is described in the Project Management Control System (PMCS) in Work Breakdown Structure (WBS) 5.0 including resources, schedule, and costing details.

EPO is at an appropriate level of maturity for construction start.

There are challenges with EPO in an MREFC project

Must adhere to MREFC "no comingling" of funds policy

- <u>Only</u> for project construction, acquisition, commissioning and upgrades
- Operating an EPO program is <u>disallowed</u> with MREFC funds

Remain agile and flexible building interfaces for 2023-2033

- Public more demanding than scientists
- Technology trends change rapidly

Prioritize and Partnerships

Institutional Member EPO programs

EPO WBS is Organized around Key Deliverables by Audience

05C	Education and Public Outreach Construction		Deliverables			
05C.00	EPO Level 2 Milestones					
05C.01	System Management		EPOC Hardware			
05C.02	EPO Database and Data Access Services		CS Projects			
05C.03	Infrastructure for Citizen Science					
05C.04	Classroom / Online Research Toolkit	*	Online Research Projects PD Workshon Model			
05C.05	Visualization including Science Museums		Software Tools			
05C.06	User Interfaces					

Content Module Library

4 Audiences:

General Public (GP) Citizen Science (CS) Classroom/Online Research (CR) Visualization including Science Museums (ISE)

User Interfaces: EPO Portal LSST@HOME Virtual Workspace

EPO Construction Estimate of \$11.6M is 2.4% of NSF Funding

EPO within Overall Integrated Project Schedule

EPO Begins in FY14 and Transitions into Early Operations in FY22 after 5-year Construction Period

Good match in skills: last year of construction to those needed in operations

EPO linked to LSST through single DM/EPO Interface

ICDs are managed and under change control LSE-131 defines DM/EPO Interface

EPO Development Plan and BOE based on Prototypes and Collaborative Community Input

- Transient Events iPhone App
- Prototype Adopt-A-Patch interface (IPAC/IVOA)
- Participation in NASA Grand Challenge Workshop
- Focus Group at 2012 IPS
- Citizen Science & Visualization groups at Adler
- **UA-led Zooniverse & CAE Proposal to NSF**
- **Outreach Advisory Board**
- SysML Modeling identifies DM/EPO overlaps

I Use entire sky (picker) Use moderator's patch of Sky Use student's patch of sky

Info

EPO Goes to Early Operations in FY22 after passing successful Operations Ready Review.

ORR Criteria includes:

Verify transfer of data products from DM, using data from science commissioning Verify ability to filter alerts from DM through an event broker and transfer to EPOC Test EPO portal at full load using simulated users and commercial web site testing tools Validate key use cases using small groups of actual users

- Usability testing of User Interfaces
- Citizen Science, using prototype CS project
- Classroom Research
- Science Museums, using Adler as a test user
- LSST@HOME, including full use of inter-user communication and shared workspace
- Feed through of science queries to DM database

Verify functionality of administrative interfaces to EPOC during all testing activities

- Management of user accounts
- Performance monitoring of EPOC and EPO Portal
- Ticketing system
- Test cybersecurity using red team approach

EPO Risks are not a Significant Threat to Project Success

Secondary sort always by expected exposure cost

Tracking 13 EPO Risks; total cost of EPO risk exposure is small (\$1,056K FY13)
EPO is unique in that science operations are not dependent on this subsystem.
We can use the first few years of construction, until FY17, to continue to understand and reduce risk.

Risk ID# (Hover)	Edit Risk (Click)	Title	Review Status (days)	Trigger Date	Probability	Non-labor Cost (2013USD)	Schedule Cost (2013USD)	Expected Exposure Cost (2013 K-USD)	Expected Exposure Cost (then-year)	Estimator	Row # Sort Total Cost

•						111					•	

The total expected exposure cost in FY2013 USD is: \$ 1055.7 K\$ The total expected exposure cost in then-year USD is: \$ 1273.89 K\$

EPO Plan Changes since 2011 Cost Review

- Costs decreased although schedule lengthened by 9 months
- Contracts replaced with labor
- Refined sizing and costing model for EPOC reduced costs
- Division of effort between EPO and PMO clarified
- Overhead costs now in PMO

	Cost Review	2013
Total FTE	45.9	52.2
Cost	12.2M	11.6M
Schedule	7Y, 6 mos	8Y, 3mos

Comments from PDR (1 of 3)

- 32. Recommendation: Staff should create a logic model for each goal set, establish priorities for developing learning experiences, and rework consistent UbD tables, one for each learning experience. During the PDR session, staff discussed well-developed ideas that should be included in the plan, for example the need for longer professional development experiences that could be offered in partnership with LSSTC members.

TUCSON MARRIOTT UNIVERSITY PARK + 880 EAST SECOND STREET + 520.792.4100

LSST CORPORATION PRELIMINARY DESIGN REVIEW AUGUST 29TH, 2011

Comments from PDR (2 of 3)

 33. Recommendation: For clarity, separate sections are probably needed for metrics and program assessment, perhaps with the metrics incorporated into the logic models and assessment of learning incorporated into the UbD process. Staff might check with an NSF program officer regarding the preferred format for the evaluation plan.

TUCSON MARRIOTT UNIVERSITY PARK + 880 EAST SECOND STREET + 520.792.4100

LSST CORPORATION PRELIMINARY DESIGN REVIEW AUGUST 29TH, 2011

Comments from PDR (3 of 3)

 34. Recommendation: The logic model should include mechanisms to motivate participation in the learning experiences by "inattentive" and underserved populations. For example, LSST could build portal elements for parents, youth organization leaders and others to bring young people to LSST learning experiences. They should also build relationships with appropriate organizations that normally serve these populations.

TUCSON MARRIOTT UNIVERSITY PARK + 880 EAST SECOND STREET + 520.792.4100

LSST CORPORATION PRELIMINARY DESIGN REVIEW AUGUST 29TH, 2011

GOAL: Increase minority participation in LSST Project, LSST workforce, and eventual LSST EPO Users

Inputs	Activities	Outputs	Outcomes		
38 IM and their existing Diversity efforts	 Prioritize recruitment of minorities for participation in Design & Development Efforts Proactively engage URM through UI / EPO Portal Attend meetings attended by URM to build Sustainable Partnerships Remove Unconscious Bias from hiring committees Identify and obtain funds to hire diversity coordinator 	# Minorities on OAB# Minorities on SC# Minorities involved in focus groups and	Increased minority representation in the project now, before operations		
LSSTC Board IINSPIRE & PAARE Programs		 Ibecus groups and usability testing # Meetings where LSST has an active presence # Contacts made at meetings # Agenda items pertaining to diversity discussed at OAB, AHM, LSSTC and other project sponsored meetings 	Formation of group of individuals, from all inputs, that are committed to the cause		
(2008-2010) AURA WDC			Diverse workforce of employees working on LSST		
AURA CAS NSF efforts to increase diversity			Put resources into Diversity Goal, demonstrating it is a priority for the project.		
	Learn from other projects that have had success in this area				

What topics should be discussed next so you can address the charge, including EPO-specific #7?

- 7. Is there a strong plan to promote science education and public outreach during construction and commissioning, continuing credibly into operations?
 - Consider the proposed educational outreach and broader societal impact activities and advise on the merits of the plan.
 - Review the preparatory work during construction leading up to those plans.
 - Is the planned capital investment in the outreach and education activities from MREFC funds appropriate, wellconceived, adequate to enable the plans, and investment ready?
